

Vroom

is a vim based presentaiton software by INGY

Vroom is cool

I just show basic future

Lets see it

```
\---- config
# Basic config options.
title: Recursion in Regex!
indent: 5
height: 22
width: 85
skip: 0

vim: vim -S ../vimrc

vimrc: |
  set statusline=%-3f\ \ \ \ \ Recursion\ in\ Regex\ (or:\ How\ parse\ IBM\ Datastage\ dsx\ file)
  map <C-C> 3<C-^><Ctrl-Home>
  map <C-O> 2<C-^><Ctrl-Home>
  map <C-E> 5<C-^><Ctrl-Home>
  map <C-P> 11<C-^><Ctrl-Home>
  map MSM ouse Method::Signatures::Modifiers;<Esc>
```

It is config here

\----- center
Recursion in Regex

or

How parse IBM Datastage dsx file?
\=====

Today we'll talk about recursion in regular expressions

```
\----- perl,i12
```

```
\----- include amelia_1.pl
```

```
\=====
```

Here we know that% \$ + this hash contains named
brackets

Getting Started

- * Write a file called 'slides.vroom'.
 - * Do this in a new directory.
- * Run 'vroom vroom'.
- * Voilà!

```
#!/bin/bash

# To make this work, you will need Vroom 0.28 or later. Slide notes are optional, but
# recommended. Slide titles won't be used for this application.
#
# Earlier versions of Vroom will work if you add the dashes in front of the vroom commands
# (e.g. `vroom -compile` and `vroom -html`). But the HTML is formatted a bit differently, so
# I make no promises that it will come out looking as good as the newest versions.

# You'll also need wkhtmltopdf. If you don't have it, you can get it here:
# http://code.google.com/p/wkhtmltopdf/
#
# Note that you will almost certainly need the static version in order to handle multiple HTML
# files. See the README file for full details:
# https://github.com/antialize/wkhtmltopdf/blob/master/README\_WKHTMLTOPDF

# for some reason, just doing an ls of html/ doesn't get the slides in the right order
# this seems to fix it
vroom compile
slides="$(ls 0* | perl -lne 'print "html/$_html"')"
#echo $slides
vroom html

wkhtmltopdf -O Landscape $slides Vroom_is_Simple.pdf
```

```
\----- bash
```

```
\----- include gen_pdf_vroom
```

```
└─[mishin@mishin-Satellite-T230]-(~/github/presentation/regex_recursion) [05:24]  
└─ → milla-tutorial$ ../../bd2c2ba549a3470e360e/gen_pdf
```

Navigation

- * Hit <SPACE> to move forward.
- * Hit <BACKSPACE> to go backwards.
- * Hit 'Q' to quit.

```
# This is some Perl code.  
# Notice the syntax highlighting.  
# Run it with the <RR> vim command.  
for my $word (qw(Vroom totally rocks!)) {  
    print "$word\n";  
}
```

Get Vroom!
